### **Petite Delight Beebalm**

***Monarda 'Petite Delight'***

Height: 18 inches

Spread: 18 inches

Spacing: 16 inches

Sunlight: ☉ ●

Hardiness Zone: 3

Other Names: Bergamot, Oswego Tea

#### **Description:**

The first dwarf variety with mildew resistant foliage. Lavender-rose flowers top the stout, square stems from midsummer to early fall on lush dark green, crinkled foliage. Nice cut flower. Attracts bees, butterflies and hummingbirds.

#### **Ornamental Features**

Petite Delight Beebalm has masses of beautiful clusters of fragrant purple flowers at the ends of the stems from mid to late summer, which are most effective when planted in groupings. Its fragrant pointy leaves remain forest green in color throughout the season.

#### **Landscape Attributes**

Petite Delight Beebalm is a dense herbaceous perennial with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading
- Self-Seeding

Petite Delight Beebalm is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

### **Planting & Growing**

Petite Delight Beebalm will grow to be about 15 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 16 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
