Red Rocks Beard Tongue
Penstemon x mexicali 'Red Rocks'

Plant Height: 18 inches
Flower Height: 24 inches
Spread: 18 inches
Spacing: 14 inches
Sunlight: ☉

Hardiness Zone: 4

Other Names: Beardtongue

Description:

Spikes of bright rose flowers have white throats with magenta rose veins attract hummingbirds. Does very well in Rocky Mountain and Great Plains states. Sheer for rebloom.

Ornamental Features

Red Rocks Beard Tongue has masses of beautiful spikes of hot pink tubular flowers with white throats rising above the foliage from mid summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves remain forest green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Red Rocks Beard Tongue is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Red Rocks Beard Tongue is recommended for the following landscape applications;

Planting & Growing

Red Rocks Beard Tongue will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Red Rocks Beard Tongue is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
