Orange Dream Japanese Maple

Acer palmatum 'Orange Dream'

Height: 12 feet

Spread: 10 feet

Sunlight: ● ●

Hardiness Zone: 5

Description:

This new introduction features beautiful leaves which emerge orange turning to lime-green for the summer then back to orange in fall for a truly dynamic season of growth; attractive green bark is catchy in winter, upright habit of growth; an ideal accent

Ornamental Features

Orange Dream Japanese Maple is primarily valued in the landscape or garden for its ornamental upright and spreading habit of growth. It has attractive chartreuse foliage edged in orange which emerges orange in spring. The small lobed palmate leaves are highly ornamental and turn outstanding shades of orange and gold in the fall. The smooth green bark is extremely showy and adds significant winter interest.

Landscape Attributes

Orange Dream Japanese Maple is a dense deciduous tree with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Orange Dream Japanese Maple is recommended for the following landscape applications;

Planting & Growing

Orange Dream Japanese Maple will grow to be about 12 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Orange Dream Japanese Maple is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
