

### Peppermint Stick Giant Reed Grass

*Arundo donax 'Peppermint Stick'*

Height: 12 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 5

Other Names: Spanish Reed

#### Description:

Looks like a bamboo or corn but this is a reed grass with dazzling leaves striped in green and white that stays vivid all summer; this variety is not invasive, and loves damp, boggy or even wet soils; use as an accent, or mass as a colorful backdrop

#### Ornamental Features

Peppermint Stick Giant Reed Grass is primarily valued in the landscape or garden for its ornamental upright and spreading habit of growth. It features airy plumes of burgundy flowers rising above the foliage from late summer to mid fall. Its attractive large sword-like leaves remain green in color with prominent white stripes throughout the season.

#### Landscape Attributes

Peppermint Stick Giant Reed Grass is an herbaceous perennial grass with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Peppermint Stick Giant Reed Grass is recommended for the following landscape applications;

### **Planting & Growing**

Peppermint Stick Giant Reed Grass will grow to be about 12 feet tall at maturity, with a spread of 8 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Peppermint Stick Giant Reed Grass is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
