Blueberry Delight Juniper

Juniperus communis 'AmiDak'

Height: 4 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 2

Description:

An arching, sprawling evergreen shrub with very pointy needles streaked with interesting silvery blue lines and abundant showy powdery blue berries; extremely adaptable to poor soils and dry locations, very hardy

Ornamental Features

Blueberry Delight Juniper is primarily grown for its highly ornamental fruit. It features an abundance of magnificent blue berries from late spring to late winter. It has attractive powder blue foliage with silver stripes. The needles are highly ornamental and turn coppery-bronze in the fall, which persists throughout the winter.

Landscape Attributes

Blueberry Delight Juniper is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Blueberry Delight Juniper is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Blueberry Delight Juniper will grow to be about 4 feet tall at maturity, with a spread of 8 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
