Jade Frost Archangel Lamiastrum galeobdolon 'Jade Frost'

Height: 10 inches

Spread: 18 inches

Sunlight: 

Hardiness Zone: 2

Other Names: False Lamium

### **Description:**

Jade Frost Archangel Photo courtesy of NetPS Plant Finder

A fast spreading, bushy carpet of lovely green and silver leaves; small yellow flowers in mid spring; an aggressive spreader as stems root to the ground; an easy solution to dry shade areas; best in bright shade

### **Ornamental Features**

Jade Frost Archangel features subtle spikes of yellow flowers rising above the foliage from mid spring to early summer. Its attractive serrated oval leaves remain dark green in color with showy silver variegation and tinges of gravish green throughout the season.

#### Landscape Attributes

Jade Frost Archangel is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Jade Frost Archangel is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Moana Lane Garden Center & Corporate Office South Virginia St. Garden Center 1100 W. Moana Lane Reno, NV 89509 (775) 825-0600 (775) 825-0602 - Corporate Office

## **Planting & Growing**

Jade Frost Archangel will grow to be about 10 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in a location that gets morning sunlight but is shaded from the hot afternoon sun, although it will also grow in full shade. Keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
