**Blue Anise Sage**  
*Salvia guaranitica*

Plant Height: 3 feet

Flower Height: 5 feet

Spread: 5 feet

Spacing: 4 feet

Sunlight:

Hardiness Zone: 7

Other Names: Anise-scented Sage

**Description:**

Striking bright blue flowers emerge on tall spikes from mid-summer until frost; fast growing and vigorous; prefers well drained garden soils; great for containers and rock gardens

**Ornamental Features**

Blue Anise Sage features showy spikes of blue flowers with purple calyces rising above the foliage from mid summer to mid fall. Its fragrant oval leaves remain green in color throughout the season.

**Landscape Attributes**

Blue Anise Sage is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Blue Anise Sage is recommended for the following landscape applications;

### **Planting & Growing**

Blue Anise Sage will grow to be about 3 feet tall at maturity extending to 5 feet tall with the flowers, with a spread of 5 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.

Blue Anise Sage is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our experts for more information on how to protect it over the winter months.
