Under the Sea™ Sea Urchin Copper Coleus

Solenostemon scutellarioides 'Sea Urchin Copper'

Height: 10 inches

Spread: 12 inches

Spacing: 8 inches

Sunlight: ● ●

Hardiness Zone: (annual)

Group/Class: Under the Sea Series

Description:

This selection presents undulating, narrow leaves splashed with intense color; has a dense and compact habit; great for gardens, containers and mixed borders

Ornamental Features

Under the Sea Sea Urchin Copper Coleus' attractive small twisted narrow leaves emerge fuchsia in spring, turning coppery-bronze in color with showy chartreuse variegation and tinges of orange the rest of the year on a plant with an upright spreading habit of growth.

Landscape Attributes

Under the Sea Sea Urchin Copper Coleus is an herbaceous annual with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. The flowers of this plant may actually detract from its ornamental features, so they can be removed as they appear. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Under the Sea Sea Urchin Copper Coleus is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Better Plants. Better Advice. Better Results.

Planting & Growing

Under the Sea Sea Urchin Copper Coleus will grow to be about 10 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in a location that gets morning sunlight but is shaded from the hot afternoon sun, although it will also grow in full shade. Keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Under the Sea Sea Urchin Copper Coleus is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a canvas of foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
