Megawatt™ Red Bronze Leaf Begonia

Begonia 'Megawatt Red Bronze Leaf'

Height: 24 inches

Spread: 20 inches

Spacing: 16 inches

Sunlight: ● ●

Hardiness Zone: (annual)

Other Names: Semperflorens, Fibrous

Group/Class: Wax Begonia

Description:

This selection presents striking, non-stop flowers on sturdy, well branched plants; a vigorous, outstanding performer, even in heat and drought; perfect for landscapes, baskets, patio containers, and borders

Ornamental Features

Megawatt Red Bronze Leaf Begonia is bathed in stunning clusters of scarlet orchid-like flowers with orange overtones and yellow throats at the ends of the stems from mid spring to mid fall. Its attractive glossy heart-shaped leaves remain dark green in color with hints of coppery-bronze throughout the year. The red stems can be quite attractive.

Landscape Attributes

Megawatt Red Bronze Leaf Begonia is an herbaceous annual with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

Better Plants. Better Advice. Better Results.

This is a high maintenance plant that will require regular care and upkeep, and usually looks its best without pruning, although it will tolerate pruning. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Megawatt Red Bronze Leaf Begonia is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Planting & Growing

Megawatt Red Bronze Leaf Begonia will grow to be about 24 inches tall at maturity, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 16 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Megawatt Red Bronze Leaf Begonia is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
