**Hermann's Pride Yellow Archangel**  
*Lamium galeobdolon 'Hermann's Pride'*

Height: 12 inches

Spread: 18 inches

Sunlight: ● ●

Hardiness Zone: 2

Other Names: False Lamium

**Description:**

Small, yellow flowers bloom in short spires on this vigorous groundcover. Silver leaves with green veins. Tolerates humidity. Pt to full shade. Drought tolerant. Attracts butterflies, bees, or birds

**Ornamental Features**

Hermann's Pride Yellow Archangel features subtle spikes of yellow flowers rising above the foliage in mid spring. Its attractive serrated narrow leaves remain silver in color with distinctive dark green veins throughout the season.

**Landscape Attributes**

Hermann's Pride Yellow Archangel is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting birds, bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Hermann's Pride Yellow Archangel is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

### Planting & Growing

Hermann's Pride Yellow Archangel will grow to be about 12 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
