**Farina® Arctic Blue Salvia**  
***Salvia farinacea 'Farina Arctic Blue'***

Plant Height: 12 inches  
Flower Height: 18 inches  
Spread: 12 inches  
Spacing: 10 inches  
Sunlight: ☉  
Hardiness Zone: (annual)  
Other Names: Mealycup Sage  
Group/Class: Farina Series

**Description:**

With beautiful spikes of blue and lavender flowers, blooming from May until October, this selection is ideal for patio containers, garden landscapes and cut flowers; easy to grow with low maintenance

**Ornamental Features**

Farina Arctic Blue Salvia has masses of beautiful spikes of powder blue flowers with lavender overtones rising above the foliage from mid spring to mid fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its fragrant narrow leaves remain green in color throughout the season.

**Landscape Attributes**

Farina Arctic Blue Salvia is an herbaceous annual with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Farina Arctic Blue Salvia is recommended for the following landscape applications;

### **Planting & Growing**

Farina Arctic Blue Salvia will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Farina Arctic Blue Salvia is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
