Jubilee Corn
Zea mays 'Jubilee'

Height: 6 feet

Spread: 12 inches

Spacing: 8 inches

Sunlight: ☉

Hardiness Zone: (annual)

Description:

A high yielding and strong stalked variety that matures just in time for late summer BBQs; produces 9" long ears of deep golden yellow kernels; sweet and tender flavor, perfect for fresh eating, roasting, grilling, canning and freezing

Edible Qualities

Jubilee Corn is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces small cobs of yellow long kernels with gold overtones which are typically harvested when mature. The kernels have a sweet taste.

The kernels are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Canning
- Freezing

Planting & Growing

Jubilee Corn will grow to be about 6 feet tall at maturity, with a spread of 12 inches. When planted in rows, individual plants should be spaced approximately 8 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

Better Plants. Better Advice. Better Results.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
