### Mini Green Hubbard Squash

*Cucurbita maxima 'Mini Green Hubbard'*

Height: 18 inches

Spread: 3 feet

Spacing: 18 inches

Sunlight: ☉

Hardiness Zone: (annual)

Group/Class: Winter Squash

#### Description:

An eye catching and unique variety that is easy to grow and easy to harvest; produces small oblong, tear drop shaped squash; dark green-bronze skin with white streaks lead to golden flesh; nutty and sweet, perfect for baking, mashing and steaming

#### Edible Qualities

Mini Green Hubbard Squash is an annual vegetable plant that is commonly grown for its edible qualities. It produces small dark green oblong fruit with white stripes and gold flesh which are usually ready for picking from late summer to mid fall. The fruits have a sweet taste.

The fruit are most often used in the following ways:

- Cooking
- Baking

#### Planting & Growing

Mini Green Hubbard Squash will grow to be about 18 inches tall at maturity, with a spread of 3 feet. When planted in rows, individual plants should be spaced approximately 18 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America, and it is considered by many to be an heirloom variety.; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
