Reverse Variegated Spider Plant

Chlorophytum comosum 'Reverse Variegatum'

Height: 24 inches

Spread: 24 inches

Sunlight: ● ●

Hardiness Zone: 9

Other Names: Airplane Plant, Ribbon Plant

Description:

One of the most cultivated houseplant in the world, this variety is grown for its green foliage with creamy white margins; great for containers, or cascading from hanging baskets; tolerates drought and deep shade, but prefers bright indirect sun

Features & Attributes

Reverse Variegated Spider Plant's attractive grassy leaves remain green in color with distinctive white edges throughout the year on a plant with an upright spreading habit of growth.

This is an herbaceous houseplant with an upright spreading habit of growth. This plant should not require much pruning, except when necessary to keep it looking its best.

Planting & Growing

When grown indoors, Reverse Variegated Spider Plant can be expected to grow to be about 24 inches tall at maturity, with a spread of 24 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. This houseplant performs well in both bright or indirect sunlight and strong artificial light, and can therefore be situated in almost any well-lit room or location. It is very adaptable to both dry and moist soil, but will not tolerate any standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type or pH; an average potting soil should work just fine.
