

**Honeysong Purple Aster**  
*Stokesia laevis 'Honeysong Purple'*

Height: 12 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight: ☉

Hardiness Zone: 4

Other Names: Stoke's Aster

**Description:**

Royal purple flowers with hint of red in the center, and white stamens. Neatly mounding green foliage. Full sun. Drought tolerant. Deer, rabbit resistant. Attracts butterflies.

**Ornamental Features**

Honeysong Purple Aster has masses of beautiful royal blue daisy flowers with violet overtones and white anthers held atop the stems from mid summer to early fall, which emerge from distinctive purple flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the year.

**Landscape Attributes**

Honeysong Purple Aster is a dense herbaceous evergreen perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Honeysong Purple Aster is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### Planting & Growing

Honeysong Purple Aster will grow to be about 10 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 8 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
