

## Better Plants. Better Advice. Better Results.

### **Globe Blue Spruce** Picea pungens 'Globosa'

Height: 4 feet Spread: 6 feet Sunlight: O

Hardiness Zone: 2

Other Names: Blue Colorado Spruce; Colorado Blue

Spruce

### **Description:**

A small, dense globe-shaped shrub, very unlike the species. Adaptable and hardy; intensely blue needles, an excellent choice for form and color in the garden

#### **Ornamental Features**

Globe Blue Spruce is a dwarf conifer which is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has attractive blue evergreen foliage which emerges silvery blue in spring. The needles are highly ornamental and remain blue throughout the winter.

#### **Landscape Attributes**

Globe Blue Spruce is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Globe Blue Spruce is recommended for the following landscape applications;

- Vertical Accent
- General Garden Use

#### **Planting & Growing**

Globe Blue Spruce will grow to be about 4 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

# Better Plants. Better Advice. Better Results.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
