**Winter Jewels® Black Diamond Hellebore**

*Helleborus 'Black Diamond'*

Height: 18 inches

Spread: 22 inches

Spacing: 18 inches

Sunlight: ● ●

Hardiness Zone: 4

Other Names: Lenten Rose, Winter Rose

Group/Class: Winter Jewels Series

**Description:**

This stunning variety produces bushy mounds of thick evergreen leaves; dark red flower stalks bear showy, cup shaped, deep purple to black blooms from late winter to spring; a great selection for shade gardens

**Ornamental Features**

Winter Jewels Black Diamond Hellebore features showy nodding deep purple cup-shaped flowers with black overtones at the ends of the stems from late winter to early spring. Its attractive serrated oval compound leaves remain dark green in color throughout the year.

**Landscape Attributes**

Winter Jewels Black Diamond Hellebore is an herbaceous evergreen perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Winter Jewels Black Diamond Hellebore is recommended for the following landscape applications;

### **Planting & Growing**

Winter Jewels Black Diamond Hellebore will grow to be about 15 inches tall at maturity, with a spread of 22 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
