**Daystar™ Hot Coral Begonia**  
*Begonia 'TNBEGDHC'*

Height: 24 inches

Spread: 16 inches

Spacing: 10 inches

Sunlight: ●

Hardiness Zone: (annual)

Group/Class: Daystar Series

**Description:**

An outstanding trailing begonia presenting lovely deep, dark green leaves with toothed edges; large, hot coral flowers are produced throughout the season; grows well in humid conditions; great spiller for containers, or hanging baskets

**Ornamental Features**

Daystar Hot Coral Begonia features showy nodding coral-pink orchid-like flowers at the ends of the stems from mid spring to early fall. Its attractive serrated heart-shaped leaves remain dark green in color with hints of burgundy throughout the year.

**Landscape Attributes**

Daystar Hot Coral Begonia is an herbaceous annual with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a high maintenance plant that will require regular care and upkeep, and usually looks its best without pruning, although it will tolerate pruning. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Daystar Hot Coral Begonia is recommended for the following landscape applications;

### **Planting & Growing**

Daystar Hot Coral Begonia will grow to be about 24 inches tall at maturity, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in a well-shaded location. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Daystar Hot Coral Begonia is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
