**Inticancha® Sunstar Alstroemeria**

***Alstroemeria 'Inticancha Sunstar'***

Height: 14 inches

Spread: 14 inches

Spacing: 14 inches

Sunlight: ☉ ●

Hardiness Zone: (annual)

Other Names: Peruvian Lily

Group/Class: Inticancha Series

**Description:**

This impressive, compact and dense variety presents stunning fuchsia-pink blooms with yellow throats and dramatic burgundy spots; mounded, dark green foliage provides contrast; great for beds, borders and containers; excellent cut flower quality

**Ornamental Features**

Inticancha Sunstar Alstroemeria features showy bracted fuchsia trumpet-shaped flowers with yellow throats and burgundy spots at the ends of the stems from early summer to early fall. The flowers are excellent for cutting. Its pointy leaves remain dark green in color throughout the season.

**Landscape Attributes**

Inticancha Sunstar Alstroemeria is an herbaceous annual with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It is a good choice for attracting bees, butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Inticancha Sunstar Alstroemeria is recommended for the following landscape applications;

### **Planting & Growing**

Inticancha Sunstar Alstroemeria will grow to be about 12 inches tall at maturity, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

Inticancha Sunstar Alstroemeria is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
