Krauter Vesuvius Plum
Prunus cerasifera 'Krauter Vesuvius'

Height: 20 feet

Spread: 12 feet

Sunlight: ○

Hardiness Zone: 4

Other Names: Myrobalan Plum, Pissard Plum

Description:

An upright-growing and colorful feature tree blanketed in a cloud of pink flowers in spring, rich deep purple foliage all season long; tends to grow more upright than other selections, best used as a solitary front yard accent or in street plantings

Ornamental Features

Krauter Vesuvius Plum is covered in stunning clusters of fragrant pink flowers along the branches in early spring before the leaves. It has attractive deep purple deciduous foliage. The pointy leaves are highly ornamental and turn an outstanding burgundy in the fall. The fruits are showy purple drupes displayed in mid summer.

Landscape Attributes

Krauter Vesuvius Plum is a deciduous tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Krauter Vesuvius Plum is recommended for the following landscape applications;

Planting & Growing

Krauter Vesuvius Plum will grow to be about 20 feet tall at maturity, with a spread of 12 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
